

Two Lane Road

Short Duration
Long Duration

Roadway Edge Work: Encroachment in Right Lane

Figure TL-8

- See General Notes
- If 360° beacon and four-way flashers or TC-12 (bar mode) are used, cones are not required for Short Duration.
- If Available Lane Width (ALW) is less than 3m, use partial lane shift (Figures TL-9, TL-10) or lane closure (TL-20A, TL-20B, TL-21).
- On low volume, unpaved roads:

- TC-12 may replace TC-4 and TC-1 (Long Duration), or TC-102B (Short Duration) if visibility permits.

- Where remaining roadway width is at least 6m and ALW is less than 3m, use Rb-91 a distance 5* upstream of start of taper and move TC-1 or TC-102B and additional distance of 5* upstream.
